JNP: The Journal for Nurse Practitioners is planning a special issue in early 2017 exploring all areas of diabetes care relevant for nurse practitioners. Standards of care updates, self-care, special populations, comorbidities, complications, and pharmaceutical updates will be addressed. If your clinical practice or research involves people with diabetes, we invite your submission of an article for this issue.

The guest editors are Barbara S. Freeland, DNP, ACNS-BC, CDE, and Donna Marvicsin, PhD, PNP-BC, CDE from the University of Michigan School of Nursing.

We are interested in papers on these topics:

- Standards of Care updates
- Diabetes and mental health concerns in primary care
- Treatment of obesity in type 2 diabetes, including bariatric surgery
- Safe transitions before and after hospitalization
- Pregnancy and type 2 diabetes
- Diabetes self-management education: standards and resources
- Drug update: oral medications
- Drug update: insulin and non-insulin injectables
- Microvascular complications: treatment updates, screening, and referrals
- Neuropathy and pain management
- Cardiovascular disease and diabetes
- Ensuring safety: avoidance and management of hypoglycemia

We are seeking feature articles (4500 words inclusive) and brief reports (2000 words inclusive). Authors may include links to websites, applications, or demonstrations; video demonstrations of up to 3 minutes; audio files; and multiple photos, forms, documents, or figures that illustrate the text.

**Manuscripts should be submitted to ees.elsevier.com/jnp by July 1, 2016.**
Authors should follow the Guide for Authors at this website and use the Article Type “Special Issue—Diabetes” when uploading submissions.
Queries can be directed to Marilyn Edmunds, Editor in Chief, at jnpeditor@aol.com.
